

# FAPH Kit

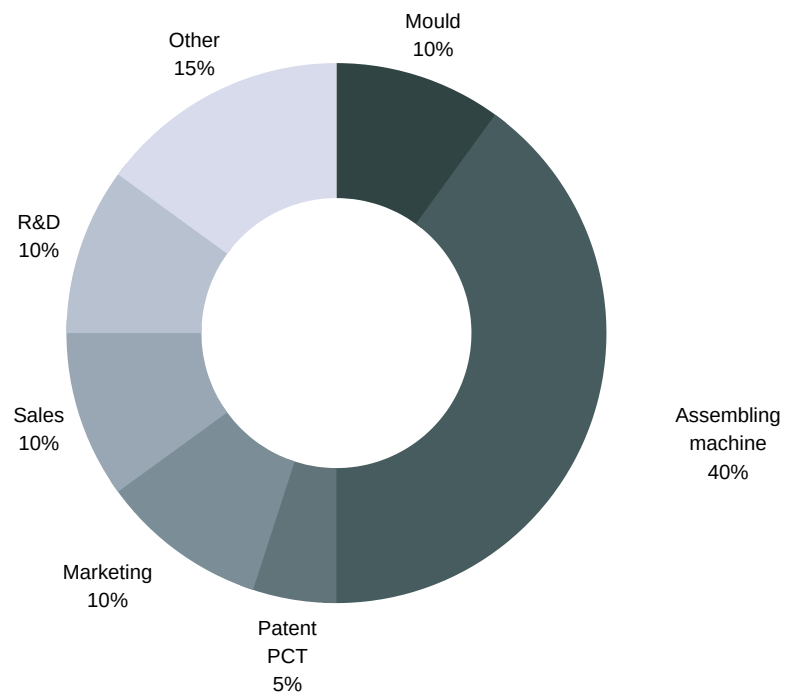

Specimen and sample collection in cervical cancer screening  
- powered by BioEvo

Area	Diagnostics
Headquarter	Perugia, Italy
Countries of operation	Italy
Founding year	2019
Status	Prototype

FAPH kit is used to collect specimens in cervical cancer screening: it composed of - traditional smear (glass slide) - new liquid base cytology. As one of its key benefits, it gives immediate sample for cytology analysis and does not require a dedicated lab machine or long process like the current available solutions on the market.

FAPH Kit provides a faster and cheaper solution in terms of readability, moreover takes less space required in laboratory.
