

BrachyDOSE

Enabling oncologists to provide more accurate treatments in high dose brachytherapy procedures.

Area	Treatment
Headquarter	Kaunas, Lithuania
Countries of operation	Lithuania
Founding year	2017
Status	Prototype

Summary

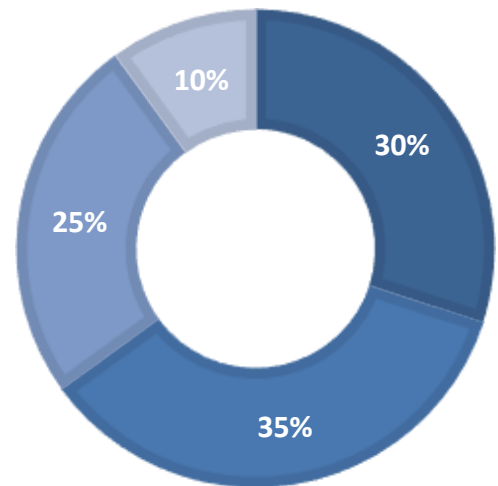

BrachyDOSE offers a tool that enables oncology doctors to provide more accurate and successful treatments in high dose brachytherapy procedures for breast cervical and prostate cancer patients. The device measures radiation dosing during brachytherapy procedures to provide scientifically based data directly to treatment planning software to reduce under or over-dosing.

The solution increases breast prostate cervical lungs and other cancer cases treatment efficiency and avoid treatment uncertainties by providing medical doctors with real time personalised data collected during high dose rate brachytherapy procedure for specific patient.
