Personalised Cancer Therapeutics.  
Intelligently Designed

<b>Area</b>	Diagnostics & Treatment
<b>Headquarter</b>	London, UK
<b>Countries of operation</b>	Global
<b>Founding year</b>	2018
<b>Status</b>	On the market

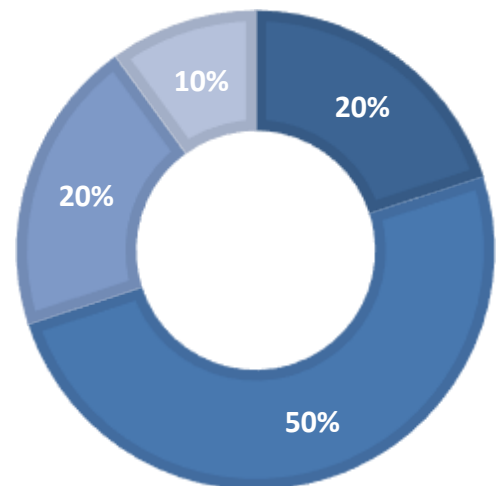

## Summary

My Personal Therapeutics offers personalised cancer therapeutics utilising technology developed at Mt Sinai Medical Center. We identify treatments for patients based on their tumor genetics. For each patient we build a genetically matched fruit fly model of the tumour which is used for large-scale drug screening to find new and effective drug combinations. Using past screening data we are also building a powerful AI-driven digital health tool which can predict effective treatment options rapidly. This platform can treat difficult cancers with combinations of approved drugs. Nearly all combinations incorporate non-cancer drugs making them less toxic and more affordable.

<b>Incubator programme</b>	KQ Labs, Health Hub Vienna, P4 Precision Medicine InvestHorizon
<b>Awards</b>	Eureka AI/QT Funding Innovate UK Funding
<b>Patents</b>	PCT/US2016/069104
<b>Revenue (last yr)</b>	£650k
<b>Funds raised</b>	£1M
<b>Currently raising:</b>	£2M

## USE OF FUNDS

■ Sales ■ Product Dev ■ Marketing ■ R&D
