

ONCOCHAIN

OncoChain

OncoChain builds a research platform to facilitate real-world data collection & value-based care in oncology.

Area	Diagnostics & treatment
Headquarter	Amsterdam, NL
Countries of operation	Romania
Founding year	2019
Status	On the market

Incubator programme HealthInc Amsterdam
Techcelerator RO
Hacking4Health
Johnson&Johnson

Awards Startupper of the Year,
2nd Place Blockchain
Summit Romania

Revenue (last yr) N/A

Funds raised €48k

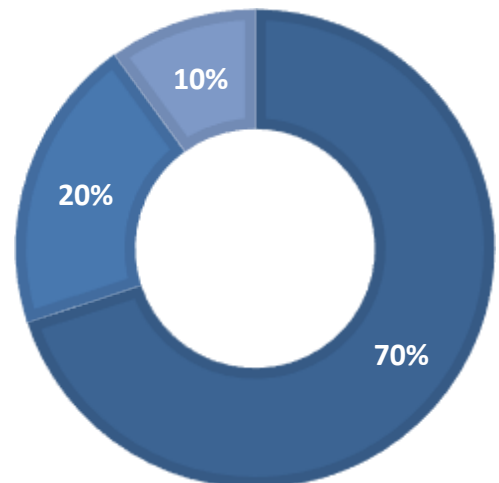

Currently raising: €35k

Summary

OncoChain creates a research platform based on a huge database with real-world data about oncological patients in order to generate useful analytics that can orientate research and deliver value-based care for providers. We develop 2 apps: 1. Our proprietary method of data collection is a web-based oncology electronic health record for providers: The OncoChain EHR 2. The OncoChain Analytics Tool for pharmaceutical companies and CROs that offers on-demand access to aggregated longitudinal clinical data integrated with intuitive and performant analytics comparing cohorts and outcomes. New drugs will get to market faster and cheaper by reducing recruitment times correctly assessing the feasibility of multi-centric studies design simulating clinical trial control arms and linking datasets.
