

AI-based platform for ultrasound offering a powerful solution to perform medical imaging and monitoring outside of the hospital

Area	Diagnostics-Monitoring
Headquarter	United States
Countries of operation	United States
Founding year	2017
Status	Prototype/MVP

Incubator programme	Bayer G4A Program EY Academy Plug and Play
Approvals	N/A (2022 f)
Awards	Mercedes - Best Social Impact Technology.

Summary

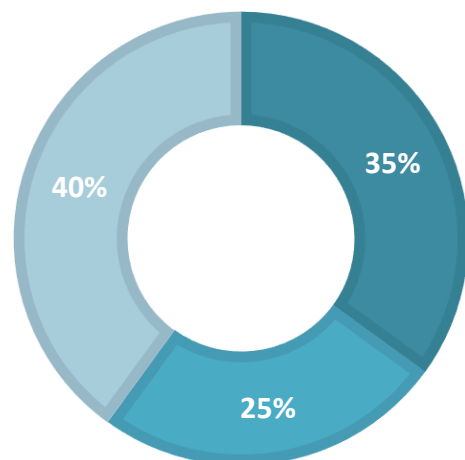

PONS is an AI integrated machine vision system for mobile ultrasound technologies that lets doctors perform medical imaging remotely. PONS autonomously carries out the risk assessment, smart image processing, segmentation and reporting of medical images to the doctor. By using PONS, doctors can monitor patients for critical health, women & child health complications anywhere and instantly.

Shifting continuous medical care from the hospital to the field environment will help in reducing the increase of the cost of healthcare and high readmission rates in hospitals.
