

BestHealth4U

Changing the world of wound care by developing a new generation of remote wound monitoring devices

Area	Monitoring, Diagnostics and Treatment
Headquarter	Portugal
Countries of operation	Global
Founding year	2017
Status	Prototype/MVP

Summary

Chronic wounds require constant management since patients with mismanaged wounds can suffer from infection, sepsis or gangrene. With no access to training or professional monitoring, patients are at risk of developing severe complications and worsening their condition. BH4U is tackling this problem with **adhesiv.Ai. It is an all-in-one solution:** a smart wound dressing that combines a biocompatible, skin-friendly and flexible adhesive patch with a digital tracking software whose measured parameters can be evaluated remotely, without the need for dressing removal and wound exposure. adhesiv.Ai enables health practitioners to effectively control and manage patients' wounds by using artificial intelligence and machine learning to predict the wound healing process and treatment.

Incubator programme
EIT Health Startup Meet
Pharma, Headstart &
Living Labs & Test Beds,
MassChallenge
Switzerland

Awards
Portugal2020,
Entrepreneur Award XXI:
Health Solution of Reuters
Pharma Awards 2020,
Women Entrepreneurship
Award (WEA) 2021

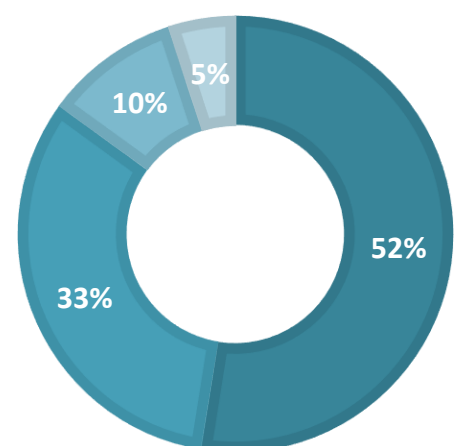

Patents
WO 2019/086716A1 and
Portuguese Patent Pending

Funds raised
€900k Grants & Awards
€ 100k Portugal Ventures

Currently raising: €2 Million

USE OF FUNDS

■ Clinical Validation ■ Manufacturing
■ Certification ■ Technology Development
