

Area	Diagnostics
Headquarter	Braga, Portugal
Countries of operation	Global
Founding year	2018
Status	Prototype

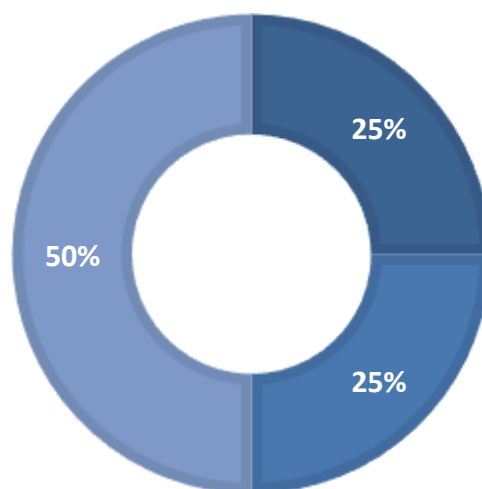

Incubator	N/A
Awards	N/A
Patents	PCT/EP2016/078406
Revenue (last yr)	N/A
Funds raised	€3M grant
Currently raising:	€800k

Summary

RUBYnanomed is a spin-off from the International Nanotechnology Laboratory (INL) that wants to bring to market the RUBYchip™: a device (microfluidic-based cartridge) that isolates enumerates and phenotypes circulating tumour cells (CTCs) directly from whole blood samples. RUBYnanomed vision is to develop a POC Instrument to give oncologists a tool for real time monitoring of the metastasis evolution during treatment enabling the prediction of disease evolution and drug resistance. RUBYchip™ can also be used as a Companion Diagnostics finding new therapeutic targets for personalized medicine.

USE OF FUNDS

■ Product Dev ■ Incubating INL ■ Validation
