

Tummi

Digital Platform for cancer patients and their health team to follow side effects of treatments

Area	Treatment
Headquarter	Brazil
Countries of operation	Brazil
Founding year	2018
Status	Beta Testing

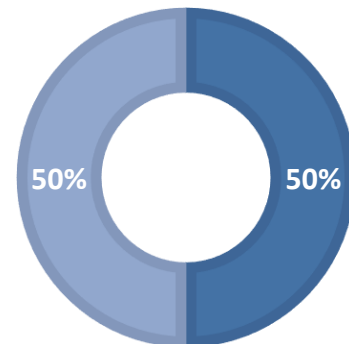

Summary

Tummi is a digital platform that presents to patients as an app where they can report what they are feeling, and the algorithm issues an emergency alert immediately if any serious adversity is detected. Patients and family members can download the Tummi App free of charge. All data reported goes to our database and engine. The health team access the data and analytics in a dashboard. The service is paid for through licenses per number of patients by clinics and hospitals, health insurance companies, as well as the pharma industry. The patient gives access to his data through a QR code that can be generated in his own app.
